

# Help DHEC Monitor Influenza in Our State and Nation

Enroll to be an **ILINET** partner today!

The U.S. Outpatient Influenza-Like Illness Surveillance Network (ILINet) is a voluntary surveillance system which collects information from healthcare professionals about patient visits in outpatient settings. This surveillance system provides a standardized method for measuring the intensity of outpatient influenza-like illness (ILI) within each state, HHS region, and nationally.

On a weekly basis, participating providers report the aggregate number of patient visits for ILI. Reporting procedures, compiling data, and submitting reports take an average of less than 30 minutes a week. Your participation will enhance our ability to track and understand how influenza affects our state.

Enrolled providers receive a free subscription to the CDC's *Morbidity and Mortality Weekly Report* and *Emerging Infectious Diseases* journals, influenza testing at no cost for select ILI specimens, and an annual certificate of appreciation. Please visit <https://www.cdc.gov/flu/weekly/overview.htm> for more information.
